

# Glacijalni reljef

U visokim planinama i polarnim krajevima, snijeg se pretvara u led pa nastaju ledenjaci – to su tvorevine slične zalađenim rijekama. Taj led postepeno se spušta u niže krajeve, a svojom težinom otkida rubne stijene. Dolina koja ostaje nakon prolaska ledenjaka, duboka je i ima **oblik slova U**.

# Glacijalni reljef

- ledenjak, cirk, morena, ledenjačko jezero, fjord

# Koja je dolina nastala djelovanjem ledenjaka?
